SUBJECT: Proposed Technical Fields for Project Officers
Handbook

1. In the Project Officers Handbook the initial selection
of scientific and technical fields for the Contract Information
System (CIS) was the set·used at that time by the Department
of Defense. Experience in designating fields was expected to
provide data indicating additions and deletions which should be
made to this initial listing.

2. The attached list reflects this experience, and your
recommendations for further modification are solicited by COB,
2 June so the improved list may be provided in the Project
Officers Handbook for use beginning FY 67.

3. Attachment A is an alphabetical listing: Attachment B is
arranged according to the scientific and technical fields. For
convenience, proposed new items are preceded by a check mark,
and items currently listed in the Handbook which are not planned
for inclusion beginning FY 67 are placed at the end of each list.
Because some items are pertinent to more than one field, they
may be listed twice: these items are identified with a superscript
(1).

4. Agriculture and Military Sciences are deleted entirely:
Navigation, Communications, Detection, and Countermeasures,
is divided and redistributed: two new fields, Photo Science and STATINTL
Mapping, and Computers and Applications, are introduced.
